# Empathy Map Canvas

---

## 1. Introduction

This document presents the Empathy Map developed for the Online Complaint Registration and Management System (OCRMS). It captures the thoughts, feelings, observations, and experiences of key users involved in the complaint management process. The empathy map helps in understanding user needs, frustrations, motivations, and expectations, enabling the design of a more effective and user-centered solution.

## 2. Persona 1 – “The Concerned Citizen”

### PERSONA 1

**Name:** The Concerned Citizen

**Profile:** Citizen, student, employee, or customer aged 18–55 years. Frequently encounters service-related issues and expects a transparent, responsive, and efficient complaint resolution process. Uses both mobile and desktop devices to submit and monitor complaints.

## 2.1 Empathy Map – Quadrant Chart

FIGURE 1.1 — EMPATHY MAP QUADRANT CHART: PERSONA 1 — THE CONCERNED CITIZEN

## 2.2 Detailed Dimension Analysis

### THINK & FEEL

- "I hope my complaint reaches the right department quickly."
- "I want to know exactly what is happening with my complaint."
- Feels anxious when complaints remain unresolved for long periods.
- Feels reassured when status updates are available in real time.

### HEAR

- "You should submit it online—it is easier to track."
- "Nobody responds to complaints submitted manually."
- "Did you receive any update from the department?"
- Feedback from friends and social media heavily influences trust in the complaint system.

### SEE

- Long queues and manual complaint registers.
- Citizens repeatedly visiting offices for updates.
- Government and private service portals with varying levels of transparency.
- Modern digital platforms offering real-time status tracking.

### SAY & DO

- "I submitted my complaint three days ago and haven't heard back."
- "I need proof that my complaint is being processed."
- Checks complaint status frequently.
- Uploads photos and documents as evidence.

### PAINS

- Lack of transparency in complaint handling.
- Delayed responses from responsible authorities.
- No real-time notifications regarding progress.
- Difficulty identifying the department responsible for resolution.

### GAINS

- Real-time complaint tracking.
- Quick complaint assignment and resolution.
- Transparent communication from administrators.
- Notifications at every stage of complaint processing.

## 3. Persona 2 – “The Complaint Resolution Officer”

Name: The Complaint Resolution Officer

**Profile:** Administrative officer, support agent, or department representative aged 25–55 years. Responsible for reviewing, categorizing, assigning, and resolving complaints while ensuring service quality and timely response.

### 3.1 Detailed Dimension Analysis

## 4. Persona Comparison Summary

| Dimension                                                                                                  | Persona 1 — Concerned Citizen                     | Persona 2 — Complaint Resolution Officer                   |
|------------------------------------------------------------------------------------------------------------|---------------------------------------------------|------------------------------------------------------------|
|  Primary Goal              | Submit complaints and receive timely resolution   | Manage complaints efficiently and improve resolution rates |
|  Core Pain                 | Delayed responses and lack of transparency        | Manual processing and complaint overload                   |
|  Core Gain                 | Real-time updates and quick resolutions           | Automated routing and analytics dashboard                  |
|  Platform Feature Needed | Complaint Tracking, Notifications, Status Updates | Dashboard, Complaint Classification, Reporting             |
|  Tech Enabler            | MERN Stack + Real-Time Notifications + MongoDB    | Admin Dashboard + Analytics + JWT Authentication           |

## 5. Conclusion

The empathy maps reveal a shared need for transparency, efficiency, and accountability. The Concerned Citizen seeks timely complaint resolution and continuous status visibility, while the Complaint Resolution Officer requires automation, analytics, and centralized complaint management. The OCRMS platform addresses both perspectives through real-time tracking, automated complaint routing, secure communication, and comprehensive administrative tools, ensuring improved user satisfaction and operational efficiency.
